

# Eine Woche, ein Beispiel

## 3.27 model theory

Ref: <https://philippschlicht.github.io/teaching/files/Lecture.pdf>

I heard something from Yilong Zhang, and want to jot down some key points so that I won't be confused next time.

# Modern Algebra (H)

## Preliminaries

- Logic, set & map, operations on Set.  $\left( \cap \cup -^c, \text{sub/quotient}, \begin{array}{l} \text{two ways of disjoint union} \\ \text{Cartesian product} \end{array} \right)$ 
  - Axiomatic set theory (ZFC)
  - Russell's paradox
  - type of proof: constructive, algorithm,...

## Ex. graph

- From  $\mathbb{N}$  to  $\mathbb{C}$  (the basic of examples, though logically it's not here)

- Peano axioms. Axiom of induction
- alg structure, order and topology
- Completeness axiom.

- Cardinal: the only property of set.
  - naive definition

<https://math.stackexchange.com/questions/1712964/attempt-at-proving-the-class-of-all-cardinals-is-a-proper-class>

	alg	total order	topo
$\mathbb{N}$	$(+, \times)$	✓	discrete
$\mathbb{Z}$	$(+, -, \times)$	✓	discrete
$\mathbb{Q}$	$(+, -, \times, \div)$	✓	dense but not complete
$\mathbb{R}$	$(+, -, \times, \div)$	✓	complete
$\mathbb{C}$	$(+, -, \times, \div)$	X	complete

- operations on cardinal
- examples
- The continuum hypothesis
- large cardinal axiom

- Order structure
  - def, operations and properties (partial/total/well order)
  - ordinal, relationship with cardinal.

Ex. "well-order" on class of cardinals.

Classify subpartial set of  $\{\text{subsets of } \{1, \dots, n\}\}$ , up to iso.  $n \leq 5$

## A bird eye's view of gp theory

- Group, field and v.s.
  - Group: \*def
    - \* initial example: Aut of set, ordered set, graph;  $\mathbb{N}, \mathbb{Z}, \mathbb{Q}, \mathbb{R}, \mathbb{C}$ .
  - Field: def + example:  $\mathbb{Q}, \mathbb{Z}/p\mathbb{Z}, \mathbb{R}, \mathbb{C}$
  - v.s. def + example:  $K^n$ , fct space
    - recall: generators, basis, dim; extra alg structures on v.s.
- "Group is symmetry"
  - more examples. Galois gp & matrix gp
  - Cayley's thm
  - group action: on sets, on graph, on v.s., ...

Ex. concepts of group action on sets

finite group of  $SO(3, \mathbb{R})$

reminder:  $GL_n(\mathbb{R})$ ,  $GL_n(\mathbb{C})$ , fundamental gp, homotopy gp,  $E(\mathbb{Q})$ , braid group, ...

- Universal property with group.
  - sub/quotient three iso.
  - Ker / Im direct sum & product
  - free group
  - presentation of group

Ex. coset decomposition

Ex.  $Z(G)$ ,  $[G, G]$ , centralizer and normalizer.

- Decomposition of group
  - simple gp, ind gp
  - filtration
  - Zassenhaus lemma, Schreier refinement theorem
  - split, semi-product gp
  - Results of simple group.

Ex. cyclic gp case

abelian gp case.  $\leadsto$  "abelian category"

Levi decomposition

## Down-to-earth analysis.

- f.g. abelian gp + apps.
  - Ex. lattice & Crystallographic point gp
- $G$  act on  $G$
- Sylow thm
- app: classifications of gp of small order. research on specific gp.

## Ring & module

- Basic def, e.g.  $R[x]$ ,  $R[[x]]$ ,  $R\{x\}$ ,  $R\langle x \rangle$
- Category,  $k$ -algs
- Basic def of modules, abelian category

E.x.  $R$ -algs.

tensor product, change of basis

three rep theory

- AG translation, examples.
- Concepts under AG translation
- $ED \Rightarrow PID \Rightarrow UFD \Rightarrow \text{domain}$
- classification of f.g. module over PID.

<https://math.stackexchange.com/questions/765787/ring-of-convergent-power-series-in-r-and-c-is-a-local-ring>

## Field and Galois theory (See [GT/M167])

can focus more on  $\mathbb{F}_p$ ,  $\mathbb{Q}_p$ ,  $\mathbb{F}_p((t))$ , and geometrical point of view.  
(Reminder) other structures: norm, metric & topo; measure; sheaf.
