

## Examples of (non-split) reductive gps

1. forms
2. torus case
3. other cases
4. conclusions on various forms

Setting. We work over conn red gp over  $F$ . ( $G/F$  conn red)

$\bar{F}$ : the seperable closure of  $F$       mainly care about  $\mathbb{R}$  &  $p$ -adic field case.

$$\Gamma_F := \text{Gal}(\bar{F}/F)$$

$$Z^1(W, A) := \left\{ \begin{array}{l} L\varphi: W \rightarrow A \rtimes W \\ \gamma \mapsto (\gamma_0, \gamma) := L\gamma \end{array} \middle| \begin{array}{l} L\varphi: \text{continuous group homo} \\ L\varphi \text{ is a section} \end{array} \right\}$$
$$= \{ \varphi: W \rightarrow A \mid \varphi(\gamma\gamma') = \varphi(\gamma) \gamma(\varphi(\gamma')) \}$$

$$\sigma \in \Gamma_F$$

$$\varphi \in H^1(W, A)$$

$$H^1(W, A) = Z^1(W, A)/A.$$

Def. (Split)  $G$  is split if  
 $G$  has a maximal torus  $T$  over  $F$  which is split.

Def. (Quasi-split)  $G$  is quasi-split if  
 $G$  has a Borel  $B$  over  $F$ .

Borel = maximal (Zar-closed) conn sol alg subgp  
= minimal parabolic subgp  
Parabolic =  $H \leq G$  closed subgp s.t  $G/H$  is projective  
= closed subgp containing a Borel.

1. forms.

Def.  $G_1, G_2/F$  are called forms, if  
 $\exists \alpha: G_{2,\bar{F}} \xrightarrow{\sim} G_{1,\bar{F}}$  as qps not as  $\Gamma_F$ -qps!  
 $\alpha$  is considered as the information of forms.

Thm.  $\{F\text{-forms of } G\} / \sim \longleftrightarrow H'(\Gamma_F, \text{Aut}(G_{\bar{F}}))$   
 $[G_2, \alpha: G_{2,\bar{F}} \rightarrow G_{\bar{F}}] \longmapsto \gamma_\alpha := \alpha \sigma \alpha^{-1} \sigma^{-1} \xrightarrow{\text{induced action}} \gamma$

$G_2(F) := \{g \in G(\bar{F}) \mid (\gamma(\sigma) \circ \sigma)g = g \quad \forall \sigma \in \Gamma_F\}$   
 In general,  $G_2(R) := \{g \in G(\bar{F} \otimes_F R) \mid (\gamma(\sigma) \circ \sigma)g = g \quad \forall \sigma \in \Gamma_F\}$   
 e.p.  $G_2(\bar{F}) = \{(\gamma(\sigma)^{-1}g)_{\sigma \in \Gamma_F} \in \prod_{\sigma \in \Gamma_F} G(\bar{F}) \mid g \in G(\bar{F})\} \cong G(\bar{F})$   
 $G(\bar{F} \otimes_F \bar{F}) \cong G(\bigoplus_{\sigma \in \Gamma_F} \bar{F}) \cong \prod_{\sigma \in \Gamma_F} G(\bar{F})$

$(G_2, \alpha) \sim (G'_2, \alpha')$ , if  
 $\exists \beta: G_2 \rightarrow G'_2$  as an iso.

$$\begin{array}{ccc} G_{2,\bar{F}} & \xrightarrow{\alpha} & G_{\bar{F}} \\ \beta_{\bar{F}} \downarrow & & \downarrow \alpha' \circ \beta_{\bar{F}} \circ \alpha^{-1} \\ G'_{2,\bar{F}} & \xrightarrow{\alpha'} & G_{\bar{F}} \end{array}$$

Functorial on  $F$ : (Inflation - Restriction seq. [ECII, Appendix B, Prop 1.3])  
 Let  $E/F$  be finite Galois.

$$\begin{array}{ccccc} G_{2,E} & \{E\text{-forms of } G\} & \longleftrightarrow & H'(\Gamma_E, \text{Aut}(G_{\bar{F}})) & \uparrow \varphi|_{\Gamma_E} \\ \uparrow & \uparrow & & \uparrow & \uparrow \\ G_2 & \{F\text{-forms of } G\} & \longleftrightarrow & H'(\Gamma_F, \text{Aut}(G_{\bar{F}})) & \gamma \\ & \uparrow & & \uparrow & \\ & \{G_2/F: G_{2,E} \cong G_E\} & \longleftrightarrow & H'(\text{Gal}(E/F), \text{Aut}(G_{\bar{F}})^{\Gamma_E}) & \\ & \uparrow 1 & & \uparrow \text{Aut}(G_F) & \\ & & & 1 & \end{array}$$

Rmk. We have the classification of connected reductive gps:

$$\begin{array}{lcl}
 \{ \text{split red gp}/F \} & \longleftrightarrow & (X^*, \Delta, X_*, \Delta^\vee) \cong \Psi(G, B, T) \\
 \{ \text{qs red gp}/F \} & \longleftrightarrow & (X^*, \Delta, X_*, \Delta^\vee) + \Gamma_F\text{-action} \\
 & & = (X^*, \Delta, X_*, \Delta^\vee) + H'(\Gamma_F, \text{Out}(G_{\bar{F}})) \\
 \{ \text{red gp}/F \} & \longleftrightarrow & (X^*, \Delta, X_*, \Delta^\vee) + H'(\Gamma_F, \text{Aut}(G_{\bar{F}}))
 \end{array}$$

To understand the result, the following isos are needed:

$$\text{Aut}(G_{\bar{F}}) \cong \text{Inn}(G_{\bar{F}}) \rtimes \text{Aut}(G, B, T, \{u_\alpha\})$$

$$\begin{array}{ll}
 \text{Out}(G_{\bar{F}}) \cong \text{Aut}(G, B, T, \{u_\alpha\}) & \text{for embedding} \\
 \cong \text{Aut}(\Psi(G, B, T)) & \text{for combinatorics}
 \end{array}$$

Also, by the Hilbert 90, one has

$$H'(\Gamma_F, \text{Aut}(G, B, T, \{u_\alpha\})) \cong H'(\Gamma_F, \text{Aut}(G, B, T))$$

## 2. torus case

Let us try to find all the forms of the split torus  $G_m^n$ .

They're called (non-split) torus.

We know

$$\text{Aut}(G_m^n) \subseteq \text{End}(G_m^n)$$

$$\text{Hom}(G_m, G_m) \cong \mathbb{Z}$$

$\parallel$

$\parallel$

$$GL_n(\mathbb{Z}) \subseteq M^{n \times n}(\mathbb{Z})$$

$$(-)^n \leftarrow n$$

Therefore,

$$H^1(\Gamma_F, \text{Aut}(G_{m,\bar{F}})) = H^1(\Gamma_F, GL_n(\mathbb{Z}))$$

$$\stackrel{\text{when } F=\mathbb{R}}{=} \text{Hom}_{\text{grp}}(\Gamma_F, GL_n(\mathbb{Z})) / GL_n(\mathbb{Z})\text{-conj}$$

$$= \{g \in GL_n(\mathbb{Z}) \mid g^2 = \text{Id}\} / GL_n(\mathbb{Z})\text{-conj}$$

$$\left[ \begin{array}{l} \Gamma_F \text{ acts on } \text{Aut}(G_{m,\bar{F}}) \cong \text{End}(G_{m,\bar{F}}) \text{ trivially.} \\ \text{see } \bar{F}\text{-pts, } n=1: \\ \begin{array}{ccc} \bar{F}^\times & \xrightarrow{\alpha} & \bar{F}^\times \\ \sigma \downarrow & & \downarrow \sigma \\ \bar{F}^\times & \xrightarrow{\sigma_\alpha} & \bar{F}^\times \end{array} \end{array} \right] \quad \left[ \begin{array}{ccc} x & \mapsto & x^n \\ \downarrow & & \downarrow \\ \sigma(x) & & \sigma(x^n) = \sigma(x)^n \\ \Rightarrow \sigma_\alpha = \alpha \end{array} \right]$$

E.g.  $n=1, F=\mathbb{R}$

$$H^1(\Gamma_F, \text{Aut}(G_{m,\bar{F}})) \cong \{1, -1\} \xrightarrow{\varphi(\sigma) = (-)^{-1}} \varphi(\sigma) = (-)^{-1}$$

$$\downarrow \quad \downarrow$$

$$G_m \quad G = ? \quad SO_{2,\mathbb{R}}$$

$$G(\mathbb{R}) = \{g \in G_m(\mathbb{C}) \mid (\varphi(\sigma) \circ \sigma)g = g \quad \forall \sigma \in \Gamma_{\mathbb{R}}\}$$

$$= \{g \in \mathbb{C}^\times \mid (\bar{g})^{-1} = g\}$$

$$= \{g \in \mathbb{C}^\times \mid |g| = 1\}$$

$$= S^1$$

$$G(\mathbb{C}) = G_m(\mathbb{C}) = \mathbb{C}^\times$$

$$\Rightarrow G = \text{Spec } \mathbb{R}[x, y] / (x^2 + y^2 - 1) = SO_{2,\mathbb{R}}$$

Check:  $G(\mathbb{C}) = \{(x, y) \in \mathbb{C} \times \mathbb{C} \mid x^2 + y^2 - 1 = 0\}$

$$= \{(x, y) \in \mathbb{C} \times \mathbb{C} \mid (x + iy)(x - iy) = 1\}$$

$$= \{(x, y, t) \in \mathbb{C} \times \mathbb{C} \times \mathbb{C}^\times \mid \begin{array}{l} x + iy = t \\ x - iy = \frac{1}{t} \end{array}\}$$

$$\cong \mathbb{C}^\times$$

$$SO_2(K) = \left\{ \begin{pmatrix} x & y \\ -y & x \end{pmatrix} \mid x, y \in K, x^2 + y^2 = 1 \right\}$$

E.g.  $n=2, F=\mathbb{R}$

$$H^1(\Gamma_F, \text{Aut}(\mathbb{G}_{m,\bar{F}})) \cong \left\{ \begin{pmatrix} 1 & \\ & 1 \end{pmatrix}, \begin{pmatrix} 1 & \\ & -1 \end{pmatrix}, \begin{pmatrix} -1 & \\ & -1 \end{pmatrix}, \begin{pmatrix} 1 & \\ & 1 \end{pmatrix} \right\}$$

$$\begin{array}{ccccccc} \Downarrow & \Downarrow & \Downarrow & \Downarrow & & & \\ \mathbb{G}_m & \mathbb{G}_m \times \text{SO}_{2,\mathbb{R}} & (\text{SO}_{2,\mathbb{R}})^2 & G = ? & \text{Res}_{\mathbb{C}/\mathbb{R}} \mathbb{G}_m & & \end{array}$$

$$G(\mathbb{R}) = \left\{ \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} \in \mathbb{C}^\times \times \mathbb{C}^\times \mid (\varphi(\sigma) \circ \sigma) \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} = \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} \right\}$$

$$\begin{array}{c} \parallel \\ \varphi(\sigma) \begin{pmatrix} \bar{z}_1 \\ \bar{z}_2 \end{pmatrix} \\ \begin{pmatrix} \bar{z}_1 \\ \bar{z}_2 \end{pmatrix} \end{array}$$

$$= \left\{ \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} \in \mathbb{C}^\times \times \mathbb{C}^\times \mid z_1 = \bar{z}_2 \right\}$$

$$= \mathbb{C}^\times$$

$$G(\mathbb{C}) = \mathbb{G}_m^2(\mathbb{C}) = \mathbb{C}^\times \times \mathbb{C}^\times$$

$$\Rightarrow G = \text{Res}_{\mathbb{C}/\mathbb{R}} \mathbb{G}_m$$

Fact. Any (conn)  $\mathbb{R}$ -torus is product of  $\mathbb{G}_m, \text{SO}_{2,\mathbb{R}}, \text{Res}_{\mathbb{C}/\mathbb{R}} \mathbb{G}_m$

$$\begin{array}{ccc} \updownarrow & \updownarrow & \updownarrow \\ 1 & -1 & \begin{pmatrix} 1 & \\ & 1 \end{pmatrix} \\ \updownarrow & \updownarrow & \updownarrow \end{array}$$

Fact<sup>dual</sup>:  $\text{Ind}_{\mathbb{Z}}(\mathbb{Z}/2\mathbb{Z}) = \{ \mathbb{Z}_{\text{triv}}, \mathbb{Z}_{\text{sign}}, \mathbb{Z}[\mathbb{Z}/2\mathbb{Z}] \}$   
 i.e.,  $\mathbb{Z}/2\mathbb{Z}$  has 3 indecomposable integral reps.

Rmk. Using the same argument, one can show that  
 $\{ T/\mathbb{F}_p \text{ s.t. } T_{\mathbb{F}_p} \cong \mathbb{G}_{m,\mathbb{F}_p} \} = \text{products of } \mathbb{G}_m, \begin{pmatrix} a & b \\ \varepsilon b & a \end{pmatrix}, \text{Res}_{\mathbb{F}_p/\mathbb{F}_p} \mathbb{G}_m$

The torus  $G$  crspd to  $-1$ : Assume  $\{ \in \mathbb{F}_p^\times \setminus \mathbb{F}_p, \{^2 = \varepsilon \in \mathbb{F}_p, \begin{pmatrix} \varepsilon \\ p \end{pmatrix} = -1$   
 $G(\mathbb{F}_p) = \{ g \in \mathbb{G}_m(\mathbb{F}_p) \mid (\varphi(\sigma) \circ \sigma) g = g \quad \forall \sigma \in \Gamma_K \}$   
 $= \{ a+b\{ \in \mathbb{F}_p^\times \mid \varphi(\sigma)(a-b\{) = a+b\{ \}$   
 $\quad \quad \quad \parallel$   
 $\quad \quad \quad (a-b\{)^{-1}$   
 $= \{ a+b\{ \in \mathbb{F}_p^\times \mid a^2 - b^2 \varepsilon = 1 \}$   
 $\cong \{ \begin{pmatrix} a & b \\ \varepsilon b & a \end{pmatrix} \in \text{GL}_2(\mathbb{F}_p) \}$

### 3. other cases.

By using the same methods introduced in last section,  
we can compute the (inner) forms of reductive gps.

	inner forms	outer forms
$G_m$ $(G_m)^2$ $(G_m)^n$	$\emptyset$	$SO_2$ $SO_2 \times G_m, (SO_2)^2, \text{Res}_{\mathbb{C}/\mathbb{R}} G_m$ product of lower rank torus
$GL_{2,\mathbb{R}}$ $SL_{2,\mathbb{R}}$ $PGL_{2,\mathbb{R}}$	$H^x = GL_1(H \otimes_{\mathbb{R}} -)$ $H^{Nm=1} = SU_{2,\mathbb{C}/\mathbb{R}}$ ?	$(U_{2,\mathbb{C}/\mathbb{R}, \omega} = U(1,1) \ U(2,0))$ $\emptyset$ $\emptyset$
$GL_{n,\mathbb{R}}$ $SL_{n,\mathbb{R}}$ $PGL_{n,\mathbb{R}}$	? $GL_{n/2}^{Nm=1}(H \otimes_{\mathbb{R}} -)$ when $n$ even ?	$(U_{n,\mathbb{C}/\mathbb{R}, \omega} = \begin{cases} U(\frac{n}{2}, \frac{n}{2}) & n \text{ even} \\ U(\frac{n+1}{2}, \frac{n-1}{2}) & n \text{ odd} \end{cases} \ U(p,q))$ $SU(a, n-a)$ e.g. $SU(2,1)$ ? need clarification
$(SL_2)^2 / \mathbb{R}$ $(SL_2)^3 / \mathbb{R}$	$SL_2 \times SU_2, (SU_2)^2, \dots$ (8-1) possibilities	$\text{Res}_{\mathbb{C}/\mathbb{R}} SL_2$ ?

? : I have no time to compute / don't know any symbol to represent

: quasi-split gp

Compute  $\text{Aut}(G_{\mathbb{F}})$

Lemma: We understand  $\text{Aut}(G_{\mathbb{F}})$  quite well.

	$G(\mathbb{F})/Z(G(\mathbb{F})) = G^{\text{ad}}(\mathbb{F})$	$\text{Aut}(\mathbb{F}_0)$	
$G$	$\xrightarrow{1} \text{Inn}(G_{\mathbb{F}}) \longrightarrow \text{Aut}(G_{\mathbb{F}}) \xrightarrow{1} \text{Out}(G_{\mathbb{F}}) \longrightarrow 1$		
$T \text{ rk } n$	1	$GL_n(\mathbb{Z})$	$GL_n(\mathbb{Z})$
$GL_{2, \mathbb{R}}$	$PGL_2(\mathbb{C})$	$PGL_2(\mathbb{C}) \rtimes \{\pm 1\}$	$\{\pm 1\}$
$SL_{2, \mathbb{R}}$	$PGL_2(\mathbb{C})$	$PGL_2(\mathbb{C})$	1
$PGL_{2, \mathbb{R}}$	$PGL_2(\mathbb{C})$	$PGL_2(\mathbb{C})$	1
$n \geq 3$			
$GL_{n, \mathbb{R}}$	$PGL_n(\mathbb{C})$	$PGL_n(\mathbb{C}) \rtimes \{\pm 1\}^{\oplus 2}$	$\{\pm 1\}^{\oplus 2}$
$SL_{n, \mathbb{R}}$	$PGL_n(\mathbb{C})$	$PGL_n(\mathbb{C}) \rtimes \{\pm 1\}$	$\{\pm 1\}$
$PGL_{n, \mathbb{R}}$	$PGL_n(\mathbb{C})$	$PGL_n(\mathbb{C}) \rtimes \{\pm 1\}$	$\{\pm 1\}$
$(SL_2)^2 / \mathbb{R}$	$PGL_n(\mathbb{C})^2$	$PGL_n(\mathbb{C})^2 \rtimes \{\pm 1\}$	$\{\pm 1\}$
$\text{Res}_{\mathbb{C}/\mathbb{R}} SL_2$	$PGL_n(\mathbb{C})^2$	$PGL_n(\mathbb{C})^2 \rtimes \{\pm 1\}$	$\{\pm 1\}$
$(SL_2)^n / \mathbb{R}$	$PGL_n(\mathbb{C})^n$	$PGL_n(\mathbb{C})^n \rtimes S^n$	$S^n$

with different  $\Gamma_{\mathbb{R}}$ -action

Compute  $H'(\Gamma_F, -)$

Method 1: Hilbert 90 + LES

Method 2: Use black box

p-adic field: Kottwitz's isomorphism

[KP]

[DR09]

**Theorem 12.7.7** *There is a functorial isomorphism  $H^1(k, G) \rightarrow \pi_1(G)_{\Theta, \text{tor}}$ .*

**COROLLARY 2.4.3.** *The composition*

$$[\bar{X}/(1 - \vartheta)\bar{X}]_{\text{tor}} \xrightarrow{\sim} H^1(F, \Omega_C) \xrightarrow{a_*^{-1}} H^1(F, N_C) \xrightarrow{b_*} H^1(F, G)$$

*is a bijection.*

$$[\bar{X}/(1 - \vartheta)\bar{X}]_{\text{tor}} = \text{Irr}[\pi_0(\hat{Z}^{\hat{\vartheta}})].$$
