1.12 monodromy of the Gauss map

Ref:

[Kr16, cubic threefold]: Krämer, Thomas. Cubic Threefolds, Fano Surfaces and the Monodromy of the Gauss Map. Manuscripta Mathematica 149,

This is written for presentations. I may forget some important hints, so I collect the process here.

$$A \cong \mathbb{C}^g / \Lambda$$

$$Z \subset A \quad \text{sm of dim } r$$

$\leadsto$  Gauss map

$$\text{e.g. } \mathcal{L} \subset \text{Jac}(\mathcal{L})$$

$$\begin{array}{ccc} & \begin{array}{c} \text{TZ} \\ \swarrow \end{array} & \begin{array}{c} \mathcal{S} \\ \swarrow \end{array} \\ \phi: Z & \longrightarrow & \text{Gr}(g, r) \\ \cup & & \cup \\ \{p_1, \dots, p_d\} & \longrightarrow & \text{Gr}(g-1, r) \end{array} \quad z \longmapsto [T_z Z]$$

$\nwarrow$  tautological bd

$$d = \deg \Delta_Z = \phi^* \sigma_{(1)^r} = (-1)^r \phi^* c_r(\mathcal{S}) = (-1)^r c_r(\text{TZ})$$

$$\begin{array}{ccc} I_{\text{mon}} \subset Z \times \text{Gr}(g, g-1) & \xrightarrow{\subset A \times \text{Gr}(g, g-1)} & \text{Gr}(g, r) \times \text{Gr}(g, g-1) \\ \downarrow & & \downarrow \\ & & \text{Gr}(g, g-1) \end{array}$$

$\leadsto$  monodromy gp

$$\text{Gal}(\gamma) := (\text{mon gp of } I_{\text{mon}} \longrightarrow \text{Gr}(g, g-1))$$

Q: How can we compute  $\text{Gal}(\gamma)$ ?

E.g. 1.  $Z = \mathcal{C}$  non-hyperelliptic,  $Gr(g, 1) = \mathbb{P}^{g-1}$ ,

$$\begin{array}{ccc} \phi = |\omega_{\mathcal{C}}| : & \mathcal{C} & \longrightarrow \mathbb{P}^{g-1} \\ \cup & & \cup \\ \{p_1, \dots, p_{2g-2}\} & \longrightarrow & H \end{array}$$

$$Gal(\gamma) = S_{2g-2} = W(A_{2g-3})$$

E.g. 2.  $Z = \mathcal{C}$  hyperelliptic,  $Gr(g, 1) = \mathbb{P}^{g-1}$ ,

$$\begin{array}{ccccc} \phi = |\omega_{\mathcal{C}}| : & \mathcal{C} & \longrightarrow & \mathbb{P}^1 & \longrightarrow \mathbb{P}^{g-1} \\ \cup & & \cup & & \cup \\ \{p_1, \dots, p_{2g-2}\} & \longrightarrow & \{z_1, \dots, z_{g-1}\} & \longrightarrow & H \end{array}$$

$$Gal(\gamma) = S_{g-1} \rtimes (\mathbb{Z}/2\mathbb{Z})^{g-1} = W(C_{g-1})$$

E.g. 3.  $X$  : cubic threefold  $\subseteq \mathbb{P}^4$   
 $F = F(X)$  : Fano surface  $\subseteq Gr(5, 2)$   
 $F \subset Alb(F) \leftarrow \dim = 5$

$$\begin{array}{ccc} \leadsto \phi : & F & \longrightarrow Gr(5, 2) \\ \cup & & \cup \\ & F(X \cap H) & \longrightarrow Gr(4, 2) \\ & \cup & \\ & \{p_1, \dots, p_7\} & \end{array}$$

$$Gal(\gamma) = Aut(\text{Schläfli graph}) = W(E_6)$$

Q: Can we find  $Z \subset A$  sm s.t.  $Gal(\gamma) = W(E_7)$ ?
