Eine Woche, ein Beispiel

12.3. cheating sheet for six functors

Ref: https://people.mpim-bonn.mpg.de/scholze/SixFunctors.pdf

$$\begin{tikzcd} \mathcal{G} \arrow[d, dash] & \mathcal{F}\ \ \mathcal{F}' \arrow[d, dash] \\ Y \arrow[r, "f"] & X \end{tikzcd} \qquad \begin{tikzcd} Y' \arrow[r, "f'"] \arrow[d, "g'"'] & X' \arrow[d, "g"] \\ Y \arrow[r, "f"] & X \end{tikzcd}$$

$$f^* \dashv f_*$$
$$- \otimes \mathcal{F} \dashv \underline{\mathrm{Hom}}(\mathcal{F}, -)$$
$$f_! \dashv f^!$$

$f^*(-\otimes -)$

$f^*(\mathcal{F} \otimes \mathcal{F}') \cong f^*\mathcal{F} \otimes f^*\mathcal{F}'$

$f_* \underline{\mathrm{Hom}}(f^*\mathcal{F}, \mathcal{G}) \cong \underline{\mathrm{Hom}}(\mathcal{F}, f_*\mathcal{G})$

$$\begin{tikzcd} & \otimes \arrow[dl, dash] \arrow[dr, dash] & \\ f^* \arrow[rr, dash] & & f_! \end{tikzcd}$$

proj formula

$f_!(f^*\mathcal{F} \otimes \mathcal{G}) \cong \mathcal{F} \otimes f_! \mathcal{G}$

$f_* \underline{\mathrm{Hom}}(\mathcal{G}, f^!\mathcal{F}) \cong \underline{\mathrm{Hom}}(f_!\mathcal{G}, \mathcal{F})$

$f^! \underline{\mathrm{Hom}}(\mathcal{F}, \mathcal{F}') \cong \underline{\mathrm{Hom}}(f^*\mathcal{F}, f^!\mathcal{F}')$

bc: $f^* g_! \cong g'_! f'^*$

$f_* g^! \cong g'^! f'_*$

These extra formulas (compatabilities) come from the upgrade of adjunction formula to internal Hom. To upgrade the adjunction between tensor product and internal Hom, one don't need extra formula, except the association law of tensor product.

I: $f^* = f^!$

P: $f_* = f_!$

$p: X \to pt$

$H^\cdot(X; \mathbb{Z}) := p_* p^* \mathbb{1}$	$H^\cdot(X;\mathcal{F}) := p_*\mathcal{F}$	$= R\Gamma(X;\mathcal{F})$
$H^\cdot_c(X;\mathbb{Z}) := p_! p^* \mathbb{1}$	$H^\cdot_c(X;\mathcal{F}) := p_!\mathcal{F}$	
$H_\cdot(X;\mathbb{Z}) := p_! p^! \mathbb{1}$	$H_\cdot(X;\mathcal{F}) := p_!(p^!\mathbb{1} \otimes \mathcal{F})$	$= H^\cdot_c(X; p^!\mathbb{1} \otimes \mathcal{F})$
$H^{BM}_\cdot(X;\mathbb{Z}) := p_* p^! \mathbb{1}$	$H^{BM}_\cdot(X;\mathcal{F}) := p_*(p^!\mathbb{1} \otimes \mathcal{F})$	$= H^\cdot(X; p^!\mathbb{1} \otimes \mathcal{F})$

App 1. (Künneth formula)

$$\begin{tikzcd} X \times Y \arrow[r, "p_2"] \arrow[d, "p_1"'] \arrow[dr, "p"] & Y \arrow[d, "p_Y"] \\ X \arrow[r, "p_X"] & * \end{tikzcd}$$

$$H_c(X;\mathcal{F}) \otimes H_c(Y;\mathcal{G}) \cong H_c(X \times Y; \mathcal{F} \boxtimes \mathcal{G})$$

reduced to: $p_{X,!}\mathcal{F} \otimes p_{Y,!}\mathcal{G} \cong p_!(p_1^*\mathcal{F} \otimes p_2^*\mathcal{G})$

App 2. (Poincaré duality)

X: a cpt oriented mfld of dim d, then $\quad -^\vee = \underline{\mathrm{Hom}}_{\mathcal{D}(\mathbb{Z})}(-, \mathbb{Z})$

proper $\qquad p^!\mathbb{Z} \cong \mathbb{Z}[d]$ locally (Verdier duality)

$\qquad\qquad p^!\mathbb{Z} \cong \mathbb{Z}[d]$ globally

$$H^\cdot(X;\mathbb{Z})[d] \cong H^\cdot(X;\mathbb{Z})^\vee$$

reduced to: $p_* \underline{\mathrm{Hom}}(A, p^*B \otimes p^!\mathbb{1}) \cong \underline{\mathrm{Hom}}(p_!A, B)$

$$Z \xrightarrow[\text{close}]{i} X \xleftarrow{j} U \quad \rightsquigarrow \quad \begin{tikzcd} \mathcal{D}(Z) \arrow[r, "\text{pi}\ i_*=i_!\ \text{f.f}"] & \mathcal{D}(X) \arrow[l, bend right, "i^*"'] \arrow[l, bend left, "\text{pi}\ i^!"] \arrow[r, "\text{pi}\ j^*=j^!"] & \mathcal{D}(\mathcal{U}) \arrow[l, bend right, "j_!\ \text{f.f.}"'] \arrow[l, bend left, "\text{pi}\ Rj_*\ \text{f.f}"] \end{tikzcd}$$

$$\mathrm{Id} \qquad \mathrm{Id} \qquad \mathrm{Id} \qquad \mathrm{Id}$$

$$\xleftarrow[0]{i^* \quad j_!} \qquad \xrightarrow[0]{i_* \quad j^*} \qquad \xleftarrow[0]{i^! \quad Rj_*}$$

f.f. fully faithful

pi: preserve injectives. (内射)

i.e. inj sheaf $\rightsquigarrow$ inj sheaf

For X mfld, $\dim_{\mathbb{R}} X = n$, $\pi_X^! \mathbb{Z} = \mathcal{O}r_X[n] \overset{+\text{orientation}}{=\!=\!=} \mathbb{Z}_X[n]$

Just by checking the stalk & taking the dual, one gets

$$0 \longrightarrow j_! j^! \mathcal{F} \longrightarrow \mathcal{F} \longrightarrow i_* i^* \mathcal{F} \longrightarrow 0$$

$$i_! i^! \mathcal{F} \longrightarrow \mathcal{F} \longrightarrow Rj_* j^* \mathcal{F} \xrightarrow{+1}$$

Here, $H_{-1}(S^1; \mathbb{Q}) = \mathbb{Q}$ for convenience of index.

Taking $R\pi_{X,*}$

$$\begin{array}{lllll}
R\Gamma(X,Z;\mathcal{F}) & \longrightarrow & R\Gamma(X;\mathcal{F}) & \longrightarrow & R\Gamma(Z;\mathcal{F}|_Z) \xrightarrow{+1} \\
R\Gamma(X,\mathcal{U};\mathcal{F}) & \longrightarrow & R\Gamma(X;\mathcal{F}) & \longrightarrow & R\Gamma(\mathcal{U};\mathcal{F}|_{\mathcal{U}}) \xrightarrow{+1} \\
\quad \| & & & & \\
R\Gamma_Z(X;\mathcal{F}) & & & &
\end{array}$$

$$\begin{array}{llllll}
\text{When } \mathcal{F}=\mathbb{Q}_X, & H^\cdot(X,Z) & \longrightarrow & H^\cdot(X) & \longrightarrow & H^\cdot(Z) \xrightarrow{+1} \\
& H^\cdot(X,\mathcal{U}) & \longrightarrow & H^\cdot(X) & \longrightarrow & H^\cdot(\mathcal{U}) \xrightarrow{+1} \\
\text{When } \mathcal{F}=\mathbb{D}_X, & R\Gamma(X, j_!\mathbb{Q}_{\mathcal{U}}) & \longrightarrow & H_\cdot^{BM}(X) & \longrightarrow & R\Gamma(Z;\mathbb{D}_X|_Z) \xrightarrow{+1} \\
& H_\cdot^{BM}(Z) & \longrightarrow & H_\cdot^{BM}(X) & \longrightarrow & H_\cdot^{BM}(\mathcal{U}) \xrightarrow{+1}
\end{array}$$

Taking $R\pi_{X,!}$

$$\begin{array}{lllll}
R\Gamma_c(\mathcal{U},\mathcal{F}|_{\mathcal{U}}) & \longrightarrow & R\Gamma_c(X;\mathcal{F}) & \longrightarrow & R\Gamma_c(Z;\mathcal{F}|_Z) \xrightarrow{+1} \\
R\Gamma_c(Z, i^!\mathcal{F}) & \longrightarrow & R\Gamma_c(X;\mathcal{F}) & \longrightarrow & R\Gamma_c(X, Rj_*(\mathcal{F}|_{\mathcal{U}})) \xrightarrow{+1}
\end{array}$$

$$\begin{array}{llllll}
\text{When } \mathcal{F}=\mathbb{Q}_X, & H_c^\cdot(\mathcal{U}) & \longrightarrow & H_c^\cdot(X) & \longrightarrow & H_c^\cdot(Z) \xrightarrow{+1} \\
& H_c^\cdot(Z, i^!\mathbb{Q}_X) & \longrightarrow & H_c^\cdot(X) & \longrightarrow & H_c^\cdot(X, Rj_*\mathbb{Q}_{\mathcal{U}}) \xrightarrow{+1} \\
\text{When } \mathcal{F}=\mathbb{D}_X, & H_\cdot(\mathcal{U}) & \longrightarrow & H_\cdot(X) & \longrightarrow & H_\cdot(X,\mathcal{U}) \xrightarrow{+1} \\
& H_\cdot(Z) & \longrightarrow & H_\cdot(X) & \longrightarrow & H_\cdot(X,Z) \xrightarrow{+1}
\end{array}$$

$$j_! \mathcal{F} \longrightarrow Rj_* \mathcal{F} \longrightarrow i_* i^* Rj_* \mathcal{F} \xrightarrow{+1}$$

$$i^! \mathcal{F} \longrightarrow i^* \mathcal{F} \longrightarrow i^* R j_* j^* \mathcal{F} \xrightarrow{+1}$$

local cohomology compares the difference between stalks and costalks.

Quick reminder.

</table>

Application

One point compactification

$$\begin{tikzcd} X \arrow[r, hook, "\iota"] \arrow[dr, "\pi"'] & \overline{X} \arrow[d, "\overline{\pi}"] \\ & \{*\} \end{tikzcd}$$

The rigorous name is "Alexandroff extension". Just be careful that we may not be able to define f_! for general topological spaces.

$$\begin{aligned} H_c^{\cdot}(X) &= R\pi_! \pi^* \mathbb{Z} \\ &= R\overline{\pi}_! \iota_! \iota^* \pi^* \mathbb{Z} \\ &= R\overline{\pi}_* (\iota_! \iota^! \mathbb{Z}_{\overline{X}}) \\ &= H^{\cdot}(\overline{X}, \{\infty\}; \mathbb{Z}) \end{aligned}$$

$$\begin{aligned} H_{\cdot}^{BM}(X) &= R\pi_* \pi^! \mathbb{Z} \\ &= R\overline{\pi}_* \iota_* \iota^! \overline{\pi}^! \mathbb{Z} \\ &= R\overline{\pi}_* (\iota_* \iota^* \overline{\pi}^! \mathbb{Z}) \\ &= \operatorname{cone}\left(R\overline{\pi}_* i_! i^! \overline{\pi}^! \mathbb{Z} \longrightarrow R\overline{\pi}_* \overline{\pi}^! \mathbb{Z}\right) \\ &= H_{\cdot}(\overline{X}, \{\infty\}; \mathbb{Z}) \end{aligned}$$

Originally, this is another def of cpt supp coh & BM homology.

Vector bundle with 6-functors.

Goal: Define Thom class & Euler class as in [GTM82, §6]

[GTM82]: Raoul Bott, Loring W. Tu, Differential Forms in Algebraic Topology, 1982
https://link.springer.com/book/10.1007/978-1-4757-3951-0

$$\begin{tikzcd} H_c^\bullet(F) & H_{cv}^\bullet(E) \arrow[l] \arrow[d, "\cong"] \arrow[dr, bend left, "s^*"] & \\ & H^{\bullet-r}(B) & H^\bullet(B) \end{tikzcd} \qquad \begin{tikzcd} \text{generator} \in H_c^r(F) & \Phi \in H_{cv}^r(E) \arrow[l, mapsto] \arrow[d, mapsto] \arrow[dr, bend left, mapsto] & \\ & 1 \in H^0(B) & eu_B \in H^r(B) \end{tikzcd}$$

Setting

$\pi : E \longrightarrow B$ oriented v.b. with fiber $F \cong \mathbb{R}^r$

β_F : one point compactification $(\mathbb{R}^n \subset S^n)$

β_E : fiberwise compactification

$\pi_X : X \longrightarrow \{*\}$

$$\begin{tikzcd} & \bar F \arrow[r, "\iota_{\bar F}"] & \bar E \arrow[ddl, "\bar\pi"] \\ F \arrow[ur, "\beta_F"] \arrow[r, hook, "\iota_F"] \arrow[d, "\pi_F"] & E \arrow[ur, "\beta_E"] \arrow[d, "\pi"] & \\ \{p\} \arrow[r, "\iota_p"] & B & \end{tikzcd}$$

Def $\quad H_{cv}^\bullet(E) :\hat{=} H^\bullet(\bar E, \bar E - E)$

compact vertical

$$= R\pi_{\bar E,*}\, \beta_{E,!}\, \beta_E^!\, \underline{\mathbb{Z}}_{\bar E}$$

$$= R\pi_{B,*}\, (R\bar\pi_!\, \beta_{E,!})(\beta_E^*\, \underline{\mathbb{Z}}_{\bar E})$$

$$= R\pi_{B,*}\, R\pi_!\, \underline{\mathbb{Z}}_E$$

Ex. Construct the following canonical maps by six functors.

$$\begin{tikzcd} H^\bullet(\bar F, \bar F - F) \arrow[d, phantom, "\cong"] & H^\bullet(\bar E, \bar E - E) \arrow[l] \arrow[d, phantom, "\cong"] \\ H_c^\bullet(F) & H_{cv}^\bullet(E) \arrow[l] \arrow[d, "\sim"] \\ & H^{\bullet-r}(B) \end{tikzcd} \qquad \begin{tikzcd} R\pi_{\bar F,*}\, \beta_{F,!}\, \underline{\mathbb{Z}}_F \arrow[d, phantom, "\cong"] & R\pi_{\bar E,*}\, \beta_{E,!}\, \underline{\mathbb{Z}}_E \arrow[l] \arrow[d, phantom, "\cong"] \\ R\pi_{F,!}\, \underline{\mathbb{Z}}_F & R\pi_{B,*}\, R\pi_!\, \underline{\mathbb{Z}}_E \arrow[l] \arrow[d, "\sim"] \\ & R\pi_{B,*}\, \underline{\mathbb{Z}}_B[-r] \end{tikzcd}$$

This page works on the details of the last exercise. If you did that exercise or don't care the details, then skip this page.
Notice that we ignore the difference between the complex and cohomology, which is just for the convenience of presentation.

Lemma. $R\pi_! \underline{\mathbb{Z}}_E \cong \underline{\mathbb{Z}}_B[-r]$. As a result, $H^{\cdot}_{cv}(E) \cong H^{\cdot - r}(B)$.

Proof.
$$\begin{aligned} R\pi_! \underline{\mathbb{Z}}_E &= R\pi_! \pi^* \underline{\mathbb{Z}}_B && \text{expand} \\ &\cong R\pi_! \pi^! \underline{\mathbb{Z}}_B[-r] && \text{Verdier duality, } \pi \text{ is a v.b.} \\ &\xrightarrow{\sim} \underline{\mathbb{Z}}_B[-r] && \text{adjunction, iso comes from } H.(\mathbb{R}^r;\mathbb{Z}) \cong \mathbb{Z} \text{ (check locally)} \end{aligned}$$

strictly speaking, $H^i_{cv}(E) = \mathcal{H}^i(\pi_{B,*} R\pi_! \underline{\mathbb{Q}}_E)$, but we're lazy to write $\mathcal{H}$

$$\begin{aligned} H^{\cdot}_c(F) &\overset{\substack{\text{trick!} \\ bc}}{=\!=} (R\pi_! \underline{\mathbb{Z}}_E)_p \\ &=\!= \iota_p^* R\pi_! \underline{\mathbb{Z}}_E \\ &=\!= \pi_{B,*} \iota_{p,*} \iota_p^* R\pi_! \underline{\mathbb{Z}}_E \longleftarrow \pi_{B,*} R\pi_! \underline{\mathbb{Z}}_E = H^{\cdot}_{cv}(E) \end{aligned}$$

Compare with the first row:

$$\begin{aligned} R\pi_{\bar{F},*} \beta_{F,!} \underline{\mathbb{Z}}_F &=\!= R\pi_{\bar{E},*} \iota_{\bar{F},*} \beta_{F,!} \iota_F^* \underline{\mathbb{Z}}_E \\ &\overset{bc}{=\!=} R\pi_{\bar{E},*} \iota_{\bar{F},*} \iota_{\bar{F}}^* \beta_{E,!} \underline{\mathbb{Z}}_E \longleftarrow R\pi_{\bar{E},*} \beta_{E,!} \underline{\mathbb{Z}}_E \end{aligned}$$

Q: How to show that $H^0(B) \longrightarrow H^r_c(F)$ $\quad 1 \longmapsto$ generator?

A:
$$\begin{aligned} H^{\cdot - r}(B) = R\pi_{B,*} \underline{\mathbb{Z}}_B[-r] &\longrightarrow R\pi_{B,*} \iota_{p,*} \iota_p^* \underline{\mathbb{Z}}_B[-r] \\ &= \iota_p^* \underline{\mathbb{Z}}_B[-r] \qquad = \underline{\mathbb{Z}}_{\{p\}}[-r] \\ 1 &\longmapsto \text{generator} \\ &\cong \iota_p^* R\pi_! \underline{\mathbb{Z}}_E \\ &\overset{bc}{\cong} R\pi_{F,!} \iota_F^* \underline{\mathbb{Z}}_E \\ &= R\pi_{F,!} \underline{\mathbb{Z}}_F \qquad = H^{\cdot}_c(F) \end{aligned}$$

Euler class of v.b.

People are lazy to write all contravarient functors induced by s as s^*. It may be not the pullback in the 6-functor formalism.
These may cause confusion, and I hope it is fine for you.

Ex construct

$$\begin{tikzcd} s^*: H^\cdot_{cv}(E) \arrow[r] \arrow[d, equal] & H^\cdot(B) \arrow[d, equal] \\ R\pi_{B,*}R\pi_! \mathbb{Z}_E & R\pi_{B,*}\mathbb{Z}_B \end{tikzcd} \qquad \Phi \longmapsto eu_E$$

After this exercise, we get euler class $eu_E \in H^r(B)$.

A for Ex: $\pi \circ s = Id$, so

$$R\pi_{B,*} R\pi_! \mathbb{Z}_E \longrightarrow R\pi_{B,*}(R\pi_! s_*) s^* \mathbb{Z}_E = R\pi_{B,*}\mathbb{Z}_B. \qquad \square$$

Ex. Find a way to define eu_E without using Φ, i.e. construct

$$\begin{tikzcd} H^{\cdot-r}(B) \arrow[r] \arrow[d, equal] & H^\cdot(B) \arrow[d, equal] \\ R\pi_{B,*}\mathbb{Z}_B[-r] & R\pi_{B,*}\mathbb{Z}_B \end{tikzcd} \qquad 1 \longmapsto eu_E$$

[Hint. Induced by

$$\mathbb{Z}_B[-r] \cong R\pi_! \mathbb{Z}_E \longrightarrow (R\pi_! s_*) s^* \mathbb{Z}_E \cong \mathbb{Z}_B$$

in fact, use $\mathbb{Z}_E \longrightarrow s_* \mathbb{Z}_B$]

Relation with tubular nbhd

Let $j: E - B \hookrightarrow E$, T: tubular nbhd of B in E,

s(B), if you prefer rigorous notation

by applying $R\pi_{B,*}R\pi_!$ to

$$0 \longrightarrow j_! j^! \mathbb{Z}_E \longrightarrow \mathbb{Z}_E \longrightarrow s_* s^* \mathbb{Z}_E \longrightarrow 0$$

we get LES:

$$\begin{tikzcd} R\pi_{B,*}R\pi|_{E\setminus B,!}\mathbb{Z}_{E\setminus B} \arrow[r] \arrow[dd, equal] & H^\cdot_{cv}(E) \arrow[d, "\cong"] \arrow[r] & H^\cdot(B) \arrow[r, "+1"] \arrow[dd, equal] & {} \\ & H^{\cdot-r}(B) \arrow[ur, "eu_E \wedge"] \arrow[d, "\cong"] & & \\ H^{\cdot-1}(\partial T) \arrow[r] & H^\cdot(T, \partial T) \arrow[r] & H^\cdot(T) \arrow[r, "+1"] & {} \end{tikzcd}$$

Euler class of sphere bundle

Ex: Use the similar method, construct the Gysin sequence:

$$H^n(B) \xrightarrow{\pi^*} H^n(E) \xrightarrow{\pi_*} H^{n-k}(B) \xrightarrow[+1]{eu_\pi \wedge}$$

$$\begin{tikzcd} S^k \arrow[r, "\iota_k"] & E \arrow[d, "\pi"', "\text{oriented}"] \\ & B \end{tikzcd}$$

Hint: Apply the fctor $R\pi_{B,*}$ to

$$\begin{tikzcd} R^0\pi_*\underline{\mathbb{Q}}_E \arrow[r] \arrow[d, phantom, "\cong" rotate=90] & R\pi_*\underline{\mathbb{Q}}_E \arrow[r] & R^k\pi_*\underline{\mathbb{Q}}_E[-k] \arrow[r, "+1"] \arrow[d, phantom, "\cong" rotate=90] & {} \\ \underline{\mathbb{Q}}_B & & \underline{\mathbb{Q}}_B[-k] & \end{tikzcd}$$

Therefore, euler class roughly describes the connecting map

$\underline{\mathbb{Q}}_B[-k] \longrightarrow \underline{\mathbb{Q}}_B[1]$ after applying $R\pi_{B,*}$

It works as an obstruction for "the triangle to be exact".

⚠ $Rf \neq \bigoplus R^i f[-i]$. Instead,

$$\phi \subset \overset{R^0 f}{} \cdots \overset{R^1 f[-1]}{\subset} \cdots \quad \cdots \overset{R^n f[-n]}{\subset} Rf.$$

It's constructed by truncations.

Hard Exercise

1. When the S^k-bundle $\pi : E \longrightarrow B$ has a section, show that $ev_E = 0$. Do we have
$$R\pi_! \pi^! \mathbb{Q}_B \cong \mathbb{Q}_B \oplus \mathbb{Q}_B[-k] \ ?$$
I think so.

2. For a rk r v.b. $\pi : E \longrightarrow B$ and the crspd S^{r-1}-bundle $\tilde{\pi} : \tilde{E} \longrightarrow B$, show that they define the same Euler class.
How are their Gysin sequences related?

3. Discuss the maps
$$\begin{array}{ccccc} \mathrm{Vect}_B^{\mathrm{rk}\, r} & \longrightarrow & \{S^{r-1}\text{-bundle over } B\} & \longrightarrow & H^r(B;\mathbb{Z}) \\ E & \longmapsto & \tilde{E} & \longmapsto & ev_{\tilde{E}} \end{array}$$
Are they surj? inj?
Here, $E \cong E'$ iff $\exists$
$$\begin{tikzcd} E \arrow[rr, "\exists \text{ linear fiberwise}"] \arrow[dr, "\pi"'] & & E' \arrow[dl, "\pi'"] \\ & B & \end{tikzcd}$$
$\tilde{E} \cong \tilde{E}'$ iff $\exists$
$$\begin{tikzcd} E \arrow[rr, "\exists \text{ homeo fiberwise}"] \arrow[dr, "\pi"'] & & E' \arrow[dl, "\pi'"] \\ & B & \end{tikzcd}$$

4. https://en.wikipedia.org/wiki/Chern_class#Via_an_Euler_class
Can we directly define Chern class by 6-fctors?
How to define other characteristic classes by 6-fctors?

Explanation

Exactness & derived

$j_!$ is exact — by checking on stalks

i^*, j^* are exact — in the category Top

i_* is exact — when $Z \subset X$ is (strongly) loc. contractable.

j_* is not exact $\rightsquigarrow Rj_*$

$i^!$ is already derived.

Rmk: strongly loc. contractable: $\forall p \in X$, $\exists$ a nbhd basis $\{U_n\}_n$ of p s.t. $U_n \cap Z$ is contractable

loc. contractable: $\forall p \in X$, $\exists$ a nbhd basis $\{U_n\}_n$ of p s.t. $U_n \cap Z \subset U_n$ is contractable

E.g. $\{$strongly loc. contractable$\}$ $\subseteq$ $\{$loc. contractable$\}$ $\subsetneq$ Top

CW-cplx, topo mflds & algebraic varieties (Check?) — Cantor set

See the answer in
https://math.stackexchange.com/questions/1082601/anr-is-locally-contractible
for the subtlety of these two definitions.

I don't care. In both cases, the local cohomology vanishes in higher degree, and that's what I want.

For the non-exact functors, there maybe some problems in the composition of derived functors.

https://mathoverflow.net/questions/108734/theorem-on-composition-of-derived-functors-question-about-proof
https://mathoverflow.net/questions/435310/what-can-be-said-about-the-derived-functor-of-a-composition-between-unbounded-de

E.g. we need to check if $R\pi_{X,*} \circ Rj_* = R\pi_{U,*}$.

Luckily, in the open-closed formalism, we won't meet these problems.

Prop 1. Let $\mathcal{C} \underset{G}{\overset{F}{\rightleftarrows}} \mathcal{C}'$ ($F \dashv G$), assume F is exact. Then

① G preserves injective sheaves;

② $RG(f) \circ RG(g) = RG(f \circ g)$

Proof. ①: by universal property.

②. by adjunction

Prop 2. Let $\mathcal{C} \underset{G}{\overset{F}{\rightleftarrows}} \mathcal{C}' \underset{G'}{\overset{F'}{\rightleftarrows}} \mathcal{C}''$ ($F \dashv G$, $F' \dashv G'$). Suppose F or F' is exact, then

$$RG \circ RG'(f) = (R(G \circ G'))(f)$$

Proof. By adjunction & Grothendieck-Serre sequence. ($LF' \circ LF = L(F' \circ F)$)
When F' is exact, can use Prop 1 ①.

Cor. $R\pi_{X,*} \circ Rj_* = R\pi_{U,*}$.
Rf_* & $Rf_!$ are nice in general.

Reason: f_! sends skyscraper sheaf to skyscraper sheaf, and in general preserve injective sheaves. (need double check)

Local properties

1. They can be checked locally on the target.

f^*: composition
$f^!$: composition + $j^* = j^!$
$Rf_!$: proper bc
Rf_*: adjunction of proper bc

2. Stalk:

f^*: composition
$f^!$: for $i^!$, use triangles $\rightsquigarrow R\Gamma(X, \mathcal{U}; \mathcal{F})$
for $j^!$, $j^! = j^*$
for $\pi^!$, $\pi^! \sim \mathrm{Or}[n]$
$Rf_!$: proper bc $\rightsquigarrow$ local (proper) cohomology
Rf_*: local cohomology by definition

$$\begin{tikzcd}
Y_p \arrow[r, hook, "i_{p,Y}"] \arrow[d, "f|_{Y_p}"'] & Y \arrow[d, "f"] \arrow[r, dash] & \mathcal{G} \\
\{p\} \arrow[r, "i_p"] & X \arrow[r, dash] & \mathcal{F}
\end{tikzcd}$$

proper bc to compute stalk of $Rf_!$
