Examples of (non-split) reductive gps

1. forms
2. torus case
3. other cases

Setting. We work over conn red gp over F. (G/F conn red)

$\bar{F}$: the seperable closure of F mainly care about $\mathbb{R}$ & p-adic field case.

$\Gamma_F := Gal(\bar{F}/F)$ $\sigma \in \Gamma_F$

$$Z^1(W,A) := \left\{ \begin{array}{c} {}^L\varphi : W \longrightarrow A \rtimes W \\ \gamma \longmapsto (\gamma_0, \gamma) := {}^L\gamma \end{array} \middle| \begin{array}{l} {}^L\varphi : \textit{continuous group homo} \\ {}^L\varphi \textit{ is a section} \end{array} \right\}$$
$$= \{\varphi : W \longrightarrow A \mid \varphi(\gamma\gamma') = \varphi(\gamma)\,{}^{\gamma}(\varphi(\gamma'))\}$$

$\varphi \in H^1(W, A)$

$$H^1(W,A) = Z^1(W,A)/A.$$

Def. (Split) G is split if G has a maximal torus T over F which is split.

Def. (Quasi-split) G is quasi-split if G has a Borel B over F.

Borel = maximal (Zar-closed) conn sol alg subgp
= minimal parabolic subgp

Parabolic = $H \leq G$ closed subgp s.t G/H is projective
= closed subgp containing a Borel.

I make no claim to originality.

1. forms.

Def. $G_1, G_2/F$ are called forms, if

$\exists\ \alpha : G_{2,\bar F} \xrightarrow{\sim} G_{1,\bar F}$ as gps   not as Γ_F-gps!

α is considered as the information of forms.

Thm.

$$\{F\text{-forms of } G\} \longleftrightarrow H^1(\Gamma_F, \mathrm{Aut}(G_{\bar F}))$$

$$[G_2,\ \alpha : G_{2,\bar F} \longrightarrow G_{\bar F}] \longmapsto \varphi_\alpha := \alpha\sigma\alpha^{-1}\sigma^{-1}$$

$$G_2 \longleftarrow\!\shortmid\ \varphi$$

$$\begin{tikzcd} G_{2,\bar F} \arrow[r, "\alpha"] \arrow[d, "\sigma"'] & G_{\bar F} \arrow[d, "\sigma"] \\ G_{2,\bar F} \arrow[r, "\alpha"] & G_{\bar F} \end{tikzcd}$$

$\Gamma_F \circlearrowright G_{2,\bar F} \longrightarrow G_{\bar F} \circlearrowleft \Gamma_F, \Gamma_F$

φ_α measures the twist between two Γ_F-actions.

$$G_2(F) := \{ g \in G(\bar F) \mid (\varphi(\sigma)\circ\sigma)g = g \quad \forall \sigma \in \Gamma_F \}$$

(induced action over $(\varphi(\sigma)\circ\sigma)$)

In general, $G_2(R) := \{ g \in G(\bar F \otimes_F R) \mid (\varphi(\sigma)\circ\sigma) g = g \quad \forall \sigma \in \Gamma_F \}$

e.p. $G_2(\bar F) = \{ (\varphi(\sigma)^{-1} g)_{\sigma\in\Gamma_F} \in \prod_{\sigma\in\Gamma_F} G(\bar F) \mid g \in G(\bar F) \} \cong G(\bar F)$

$$G(\bar F \otimes_F \bar F) \cong G\Big(\bigoplus_{\sigma\in\Gamma_F} \bar F\Big) \cong \prod_{\sigma\in\Gamma_F} G(\bar F)$$

Functorial on F. (Inflation - Restriction seq. [ECII, Appendix B, Prop 1.3])

Let E/F be finite Galois.

$$\begin{tikzcd}
G_{2,E} & \{E\text{-forms of } G\} \arrow[r, leftrightarrow] & H^1(\Gamma_E, \mathrm{Aut}(G_{\bar F})) & \varphi|_{\Gamma_E} \\
G_2 \arrow[u, mapsto] & \{F\text{-forms of } G\} \arrow[u] \arrow[r, leftrightarrow] & H^1(\Gamma_F, \mathrm{Aut}(G_{\bar F})) \arrow[u] & \varphi \arrow[u, mapsto] \\
& \{G_2/F : G_{2,E} \cong G_E\} \arrow[u] \arrow[r, leftrightarrow] & H^1(\mathrm{Gal}(E/F), \mathrm{Aut}(G_{\bar F})^{\Gamma_E}) \arrow[u] & \\
& 1 \arrow[u] & 1 \arrow[u] &
\end{tikzcd}$$

$\mathrm{Aut}(G_{\bar F})^{\Gamma_E} = \mathrm{Aut}(G_E)$

Rmk. We have the classification of connected reductive gps:

$$\cong \Psi(G,B,T)$$

$$
\begin{array}{llcl}
 & \{\text{split red gp}/F\} & \longleftrightarrow & (X^*, \Delta, X_*, \Delta^\vee) \\
G \text{ split} & \{\text{qs red gp}/F\} & \longleftrightarrow & (X^*, \Delta, X_*, \Delta^\vee) + \Gamma_F\text{-action} \\
 & & & = (X^*, \Delta, X_*, \Delta^\vee) + H^1(\Gamma_F, \mathrm{Out}(G_{\bar{F}})) \\
 & \{\text{red gp}/F\} & \longleftrightarrow & (X^*, \Delta, X_*, \Delta^\vee) + H^1(\Gamma_F, \mathrm{Aut}(G_{\bar{F}}))
\end{array}
$$

To understand the result, the following isos are needed:

$$\mathrm{Aut}(G_{\bar{F}}) \cong \mathrm{Inn}(G_{\bar{F}}) \rtimes \mathrm{Aut}(G, B, T, \{u_\alpha\})$$

$$
\begin{aligned}
\mathrm{Out}(G_{\bar{F}}) &\cong \mathrm{Aut}(G, B, T, \{u_\alpha\}) && \text{for embedding} \\
&\cong \mathrm{Aut}(\Psi(G, B, T)) && \text{for combinatorics}
\end{aligned}
$$

Also, by the Hilbert 90, one has

$$H^1(\Gamma_F, \mathrm{Aut}(G, B, T, \{u_\alpha\})) \cong H^1(\Gamma_F, \mathrm{Aut}(G, B, T))$$

2. torus case

Let us try to find all the forms of the split torus $\mathbb{G}_m^n$.

They're called (non-split) torus.

We know

$$\begin{array}{ccc} Aut(\mathbb{G}_m^n) & \subseteq & End(\mathbb{G}_m^n) \\ \parallel & & \parallel \\ GL_n(\mathbb{Z}) & \subseteq & M^{n\times n}(\mathbb{Z}) \end{array}$$

$Hom(\mathbb{G}_m, \mathbb{G}_m) \cong \mathbb{Z}$

$(-)^n \leftarrow n$

Therefore,

$$H^1(\Gamma_F, Aut(\mathbb{G}_{m,\bar{F}}^n)) = H^1(\Gamma_F, GL_n(\mathbb{Z}))$$
$$= Hom_{Grp}(\Gamma_F, GL_n(\mathbb{Z})) / GL_n(\mathbb{Z})\text{-conj}$$
$$\overset{\text{when } F=\mathbb{R}}{=\!=} \{g \in GL_n(\mathbb{Z}) \mid g^2 = Id\} / GL_n(\mathbb{Z})\text{-conj}$$

[Γ_F acts on $Aut(\mathbb{G}_{m,\bar{F}}^n) \subseteq End(\mathbb{G}_{m,\bar{F}}^n)$ trivially:

see $\bar{F}$-pts, $n=1$:

$$\begin{tikzcd} \bar{F}^\times \arrow[r, "\alpha"] \arrow[d, "\sigma"'] & \bar{F}^\times \arrow[d, "\sigma"] \\ \bar{F}^\times \arrow[r, "{}^\sigma\alpha"] & \bar{F}^\times \end{tikzcd} \qquad \begin{tikzcd} x \arrow[r, mapsto] \arrow[d, mapsto] & x^n \arrow[d, mapsto] \\ \sigma(x) & \sigma(x^n) = \sigma(x)^n \end{tikzcd}$$

$\Rightarrow {}^\sigma\alpha = \alpha$]

E.g. $n=1$, $F=\mathbb{R}$

$$H^1(\Gamma_F, Aut(\mathbb{G}_{m,\bar{F}})) \cong \{1, -1\}$$

$\varphi(\sigma) = (-)^{-1}$

$$\begin{array}{cc} \Downarrow & \Downarrow \\ \mathbb{G}_m & G = \text{?} \ SO_{2,\mathbb{R}} \end{array}$$

$$G(\mathbb{R}) = \{g \in \mathbb{G}_m(\mathbb{C}) \mid (\varphi(\sigma)\circ\sigma)\, g = g \quad \forall \sigma \in \Gamma_{\mathbb{R}}\}$$
$$= \{g \in \mathbb{C}^\times \mid (\bar{g})^{-1} = g\}$$
$$= \{g \in \mathbb{C}^\times \mid |g| = 1\}$$
$$= S^1$$

$$G(\mathbb{C}) = \mathbb{G}_m(\mathbb{C}) = \mathbb{C}^\times$$

$$\Rightarrow G = Spec\, \mathbb{R}[x,y]/(x^2+y^2-1) = SO_{2,\mathbb{R}}$$

Check: $G(\mathbb{C}) = \{(x,y) \in \mathbb{C}\times\mathbb{C} \mid x^2+y^2-1 = 0\}$

$= \{(x,y) \in \mathbb{C}\times\mathbb{C} \mid (x+iy)(x-iy) = 1\}$

$= \left\{ (x,y,t) \in \mathbb{C}\times\mathbb{C}\times\mathbb{C}^\times \;\middle|\; \begin{array}{l} x+iy = t \\ x-iy = \frac{1}{t} \end{array} \right\}$

$\cong \mathbb{C}^\times$

$$SO_2(K) = \left\{ \begin{pmatrix} x & y \\ -y & x \end{pmatrix} \;\middle|\; x,y \in K,\ x^2+y^2 = 1 \right\}$$

E.g. $n=2$, $F=\mathbb{R}$

$$H^1(\Gamma_F, \mathrm{Aut}(\mathbb{G}^2_{m,F})) \cong \left\{ \begin{pmatrix} 1 & \\ & 1 \end{pmatrix}, \begin{pmatrix} 1 & \\ & -1 \end{pmatrix}, \begin{pmatrix} -1 & \\ & -1 \end{pmatrix}, \begin{pmatrix} & 1 \\ 1 & \end{pmatrix} \right\}$$

$$\Downarrow \quad \Downarrow \quad \Downarrow \quad \Downarrow$$

$$\mathbb{G}_m^2 \quad \mathbb{G}_m \times SO_{2,\mathbb{R}} \quad (SO_{2,\mathbb{R}})^2 \quad G = ? \quad \mathrm{Res}_{\mathbb{C}/\mathbb{R}} \mathbb{G}_m$$

$$G(\mathbb{R}) = \left\{ \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} \in \mathbb{C}^\times \times \mathbb{C}^\times \;\middle|\; (\varphi(\sigma) \circ \sigma) \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} = \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} \right\}$$

$$(\varphi(\sigma)\circ\sigma)\begin{pmatrix} z_1 \\ z_2 \end{pmatrix} = \varphi(\sigma) \begin{pmatrix} \bar z_1 \\ \bar z_2 \end{pmatrix} = \begin{pmatrix} \bar z_2 \\ \bar z_1 \end{pmatrix}$$

$$= \left\{ \begin{pmatrix} z_1 \\ z_2 \end{pmatrix} \in \mathbb{C}^\times \times \mathbb{C}^\times \;\middle|\; z_1 = \bar z_2 \right\}$$

$$= \mathbb{C}^\times$$

$$G(\mathbb{C}) = \mathbb{G}_m^2(\mathbb{C}) = \mathbb{C}^\times \times \mathbb{C}^\times$$

$$\Rightarrow \quad G = \mathrm{Res}_{\mathbb{C}/\mathbb{R}} \mathbb{G}_m$$

Fact. Any (conn) $\mathbb{R}$-torus is product of

$$\mathbb{G}_m, \quad SO_{2,\mathbb{R}}, \quad \mathrm{Res}_{\mathbb{C}/\mathbb{R}} \mathbb{G}_m$$

$$\updownarrow \qquad \updownarrow \qquad \updownarrow$$

$$1 \qquad -1 \qquad \begin{pmatrix} & 1 \\ 1 & \end{pmatrix}$$

$$\updownarrow \qquad \updownarrow \qquad \updownarrow$$

Fact^{dual}: $\quad \mathrm{Ind}_{\mathbb{Z}}(\mathbb{Z}/2\mathbb{Z}) = \{ \mathbb{Z}_{triv}, \mathbb{Z}_{sign}, \mathbb{Z}[\mathbb{Z}/2\mathbb{Z}] \}$

i.e., $\mathbb{Z}/2\mathbb{Z}$ has 3 indecomposable integral reps.

Rmk. Using the same argument, one can show that

$$\{ T/\mathbb{F}_p \text{ s.t } T_{\mathbb{F}_{p^2}} \cong \mathbb{G}^n_{m,\mathbb{F}_{p^2}} \} = \text{products of } \mathbb{G}_m, \begin{pmatrix} a & b \\ \varepsilon b & a \end{pmatrix}, \mathrm{Res}_{\mathbb{F}_{p^2}/\mathbb{F}_p} \mathbb{G}_m$$

The torus G crspd to -1: Assume $\xi \in \mathbb{F}_{p^2} \setminus \mathbb{F}_p$, $\xi^2 = \varepsilon \in \mathbb{F}_p$, $\left(\frac{\varepsilon}{p}\right) = -1$

$$G(\mathbb{F}_p) = \{ g \in \mathbb{G}_m(\mathbb{F}_{p^2}) \mid (\varphi(\sigma)\circ\sigma) g = g \quad \forall \sigma \in \Gamma_k \}$$

$$= \{ a+b\xi \in \mathbb{F}_{p^2}^\times \mid \underset{= (a-b\xi)^{-1}}{\varphi(\sigma)(a-b\xi)} = a+b\xi \}$$

$$= \{ a+b\xi \in \mathbb{F}_{p^2}^\times \mid a^2 - b^2\varepsilon = 1 \}$$

$$\cong \left\{ \begin{pmatrix} a & b \\ \varepsilon b & a \end{pmatrix} \subseteq GL_2(\mathbb{F}_p) \right\}$$

3. other cases.

By using the same methods introduced in last section, we can compute the (inner) forms of reductive gps.

	inner forms	outer forms
$\mathbb{G}_m$ $(\mathbb{G}_m)^2$ $(\mathbb{G}_m)^n$	ϕ	SO_2 $SO_2\times\mathbb{G}_m$, $(SO_2)^2$, $\mathrm{Res}_{\mathbb{C}/\mathbb{R}}\mathbb{G}_m$ product of lower rank torus
$GL_{2,\mathbb{R}}$ $SL_{2,\mathbb{R}}$ $PGL_{2,\mathbb{R}}$	$\mathbb{H}^\times = GL_1(\mathbb{H}\otimes_{\mathbb{R}}-)$ $\mathbb{H}^{Nm=1} = SU_{2,\mathbb{C}/\mathbb{R}}$?	$(U_{2,\mathbb{C}/\mathbb{R},\omega}$ $U(1,1))$ ϕ ϕ
$GL_{n,\mathbb{R}}$ $SL_{n,\mathbb{R}}$ $PGL_{n,\mathbb{R}}$	? $GL_{n/2}^{Nm=1}(\mathbb{H}\otimes_{\mathbb{R}}-)$ when n even ?	? $SU(a,n-a)$ e.p. $SU(2,1)$ ← need clarification ?
$(SL_2)^2/\mathbb{R}$ $(SL_2)^3/\mathbb{R}$	$SL_2\times SU_2$, $(SU_2)^2$, ϕ? $(8-1)$ possibilities	$\mathrm{Res}_{\mathbb{C}/\mathbb{R}}SL_2$?

? : I have no time to compute / don't know any symbol to represent

(shaded) : quasi-split gp

Compute $\mathrm{Aut}(G_{\bar{F}})$

Lemma. We understand $\mathrm{Aut}(G_{\bar{F}})$ quite well.

$$\begin{array}{lccccccccc}
 & & & G(\bar{F})/_{Z(G(\bar{F}))} = G^{ad}(\bar{F}) & & & & \mathrm{Aut}(\Psi_0) & & \\
 & & & \| & & & & \| & & \\
G & 1 & \longrightarrow & \mathrm{Inn}(G_{\bar{F}}) & \longrightarrow & \mathrm{Aut}(G_{\bar{F}}) & \longrightarrow & \mathrm{Out}(G_{\bar{F}}) & \longrightarrow & 1
\end{array}$$
