11.7. Berkovich space

Ref: Spectral theory and analytic geometry over non-Archimedean fields by Vladimir G. Berkovich(we mainly follow this article)
+courses from Junyi Xie
+An introduction to Berkovich analytic spaces and non-archimedean potential theory on curves

Goal: understand the beautiful picture copied from "An introduction to Berkovich analytic spaces and non-archimedean potential theory on curves"

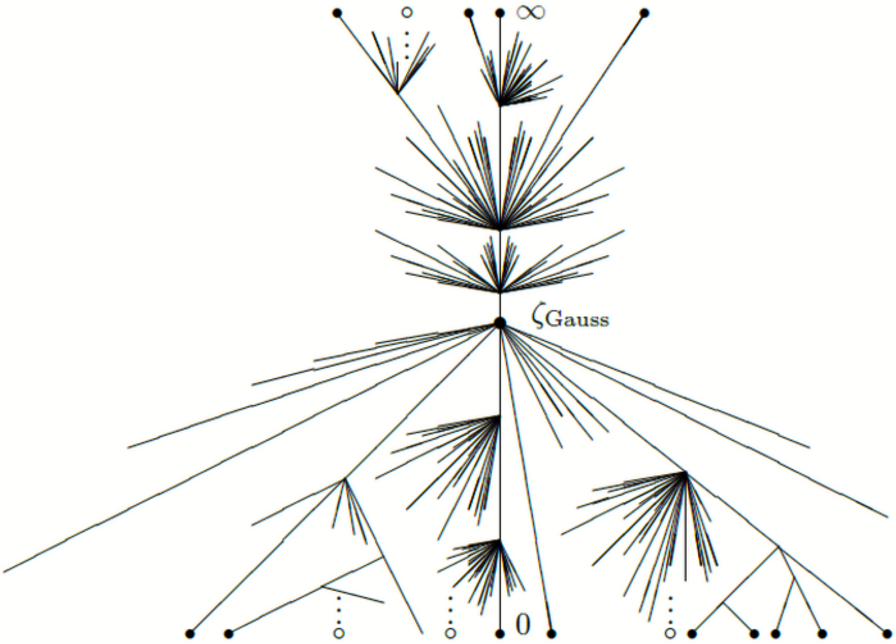

FIGURE 1. The Berkovich projective line (adapted from an illustration of Joe Silverman)

1. Seminorm

1.1. Def (seminorm of abelian group) $\|\cdot\|: M \longrightarrow \mathbb{R}_{\geq 0}$ s.t

$\|0\| = 0$ norm: $\|m\| = 0 \Rightarrow m = 0$

$\|f-g\| \leq \|f\| + \|g\|$ non-Archimedean: $\|f-g\| \leq \max(\|f\|, \|g\|)$

- seminorm $\Rightarrow$ topology

  Prop. $(M, \|\cdot\|)$ is Hausdorff $\Leftrightarrow$ $\|\cdot\|$ is norm

  Def (equivalence of norm)

- sub, quotient, homomorphism

  Def (restricted seminorm)

  Def. (residue seminorm) $\pi: (M, \|\cdot\|_M) \longrightarrow M/N$ induce the seminorm on M/N.

  $$\|\bar{m}\|_{M/N} := \inf_{\pi(m') = \bar{m}} \|m'\|_M$$

  Def (bounded / admissible) $\varphi: (M, \|\cdot\|_M) \longrightarrow (N, \|\cdot\|_N)$

  - bounded: $\exists C > 0$, $\|\varphi(m)\|_N \leq C\|m\|_M$
  - admissible: $\bar{\varphi}: (M/\ker\varphi, \|\cdot\|_{quo}) \longrightarrow (\mathrm{Im}\,\varphi, \|\cdot\|_{res})$ induces equivalence of norm.

1.2. Def (seminorm of ring non-comm, with 1): seminorm group +

$\|1\| = 1$ norm $\xrightarrow{+\text{completed}}$ Banach ring

$\|fg\| \leq \|f\|\,\|g\|$ power-multi: $\|f^n\| = \|f\|^n$ $\Big\} \Rightarrow$ valuation
multiplicative: $\|fg\| = \|f\|\,\|g\|$

- quotient, $\prod_{\text{infinite}}$, $\mathcal{A}\langle r^{-1}T\rangle$, ...
- comparison among norms: bounded.
- Def related to valuation field.

1.3. Def (seminorm of $\mathcal{A}$-module, where $\mathcal{A}$: normed ring)

seminorm group + $\exists C > 0$, $\|fm\| \leq C\|f\|\,\|m\|$

- $\hat{\otimes}_{\mathcal{A}}$

seminormed ring

$\uparrow$ $(\mathbb{Z}, |\ |_p)$, $(\mathbb{Q}, |\ |_\infty)$, $(\mathbb{Q}, |\ |_p)$

Banach ring

$\uparrow$ (R, triv) R: not field, $(\mathbb{Z}, |\ |_\infty)$, $(\mathbb{C}\langle r^{-1}T\rangle, \|\ \|_{ind})$

valuation field

Arch field	non-Arch field
$(\mathbb{R}, |\ |_\infty)$ $(\mathbb{R}/\mathbb{C}, |\ |_\infty^\varepsilon)$ $0 < \varepsilon \leq 1$	$(\mathbb{F}_q, \text{triv})$ (K, triv)
$(\mathbb{C}, |\ |_\infty)$	$(\mathbb{Q}_p, |\cdot|_p)$

2. Affine case

suppose $\mathcal{A}$: Banach ring comm + 1

$\mathcal{M}(\mathcal{A}) := \{\text{bounded mult seminorms on } \mathcal{A}\}$

with top basis generated by $U_{m,(a,b)} := \{\|\cdot\| \in \mathcal{M}(\mathcal{A}) \mid \|m\| \in (a,b)\}$

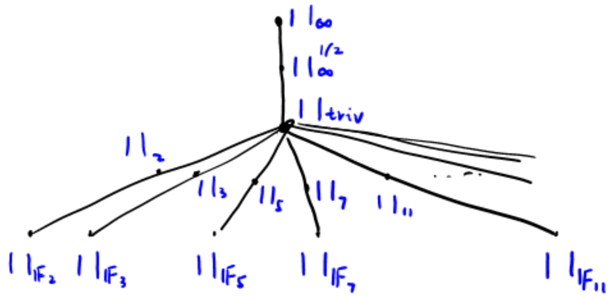
$m \in \mathcal{A}$, $(a,b) \subseteq \mathbb{R}$

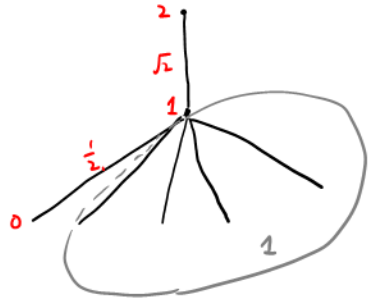
E.g. $\mathcal{A} = (\mathbb{Z}, |\ |_\infty)$

We have

$$\mathcal{M}(\mathbb{Z}, |\ |_\infty) = \left\{ \begin{array}{ll} |\ |_{triv} & \\ |\ |_p^t & : t \in (0, +\infty] \\ |\ |_\infty^\varepsilon & : \varepsilon \in (0,1] \end{array} \quad |m|_{\mathbb{F}_p} := |m|_p^\infty = \begin{cases} 0 & p \mid m \\ 1 & p \nmid m \end{cases} \right\}$$

Picture:





value of 2.

From this picture, we want to get:
Bound relations among seminorms
Topology
...
