Eine Woche, ein Beispiel 6.30 starting functions.

This is a follow-up of [2021.08.15], [2022.02.20] and [2021.05.07]. The combinatorics of starting functions is more intricate than I thought. Therefore, I collect these findings here, and wish somebody can give a rigorous proof for these phenomenons (e.p. the numbers of 1's).
