Eine Woche, ein Beispiel 3.27 model theory

Ref: https://philippschlicht.github.io/teaching/files/Lecture.pdf I heard something from Yilong Zhang, and want to jot down some key points so that I won't be confused next time.

Modern Algebra (H)

Preliminaries

Logic. set & map, operations on Set.
 Axiomatic set theory (ZFC)

(Automatic set theory (ZFC)
(Cartesian product)

- Russell's paradox

- type of proof : constructive, algorithm,...

Ex. graph

Classify topologies of [1, ..., n]

First adjunction: $Map(A \times B, C) \cong Map(A, Map(B, C))$

· From IN to C (the basic of examples, though logically it's not here)

- Peano axioms. Axiom of induction

- alg structure, order and typology

- Completeness axiom

· Cardinal the only property of set.

- naive definition

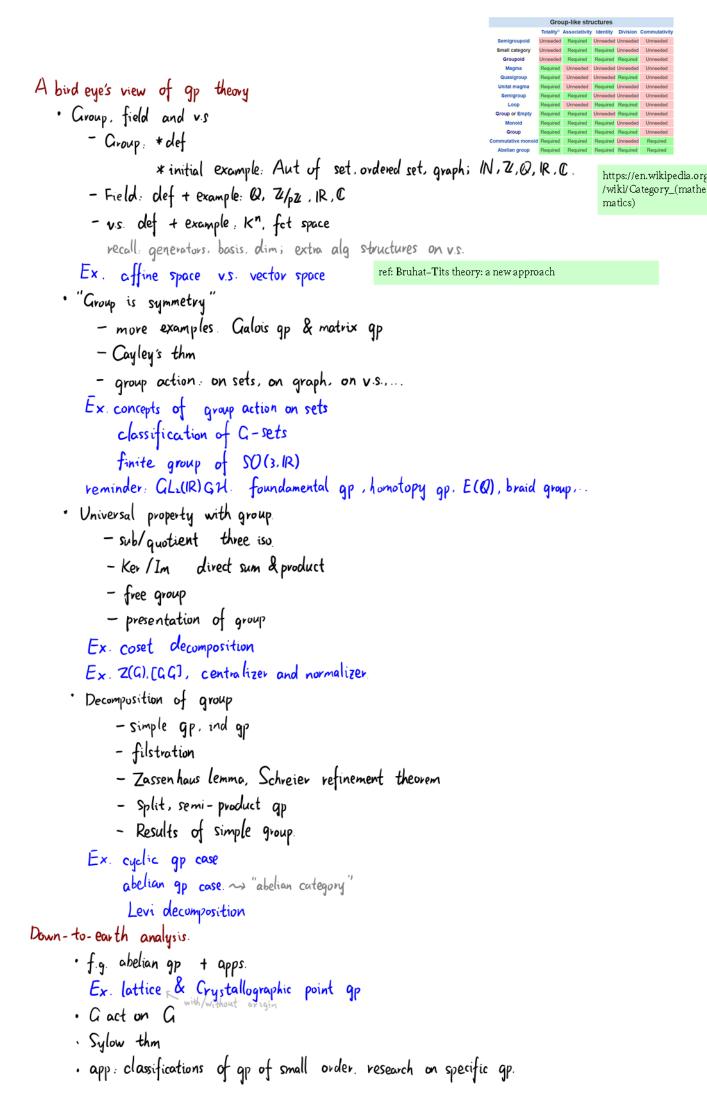

https://math.stackexchange.com/questions/1712964/attempt-at -proving-the-class-of-all-cardinals-is-a-proper-class

| | alg | total order | topo |
|----|---------------|-------------|---------------------------|
| IN | (+,×) | | discrete |
| 7 | (+,-,×) | ✓ | discrete |
| Q | (+, - , ×, ÷) | ✓ | dense but not complete |
| | (+,-, ×,÷) | ✓ | complete |
| C | (+, -, ×,÷) | | complete |

- operations on cardinal
- examples
- The continuum hypothesis
- large cardinal axiom
- · Order structure
 - def, operations and properties (partial/total/well order)
 - ordinal, relationship with cardinal.

Ex. "well-order" on class of cardinals.

Classify subpartial ordered set of Psubsets of P1, , my 1, up to iso.

Ring & module

R(x) R((x)) R[[x]] R(cx)

· Basic def. e.g. R[x], R[x], R[x], R(x)

· Category , k-algs

Ex. groupoid

· Basic def of modules, abelian category

E.x. R-algs.

tensor product, change of basis three rep theory

· AG translation, examples.

- · Concepts under AG translation
- · ED > PID > UFD > domain
- · classification of f.g. module over PID.

Field and Calois theory (See [GT/M167])

Can focus more on IFp, Qp, IFp((t)), and geometrical point of view. (Reminder) other structures norm, metric & topo; measure; sheaf.
