Eine Woche, ein Beispiel 9.5 vector bundle v.s. Local system

Key objects in Geometry & Algebra.

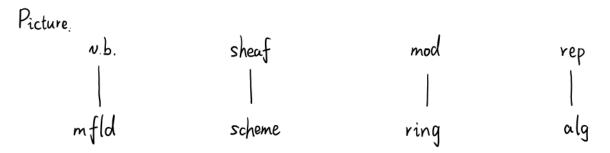

vector bundle over manifoldmodule over ring

There are hundreds of different versions of it.

```
— vector bundle over manifold notnown
differential v.b. over (real) differential mfld
Riemann surface · cplx (analytic) line bundle over Riemann surface
           Sheaf over space 代数几何
scheme theory · locally free sheaf on scheme
            · coherent sheaf on scheme
geo rep theory · local system over (real/cplx) mfld
            · perverse sheat over Riemann surface (derived)
              simplicial set over category \Delta
       — module over ring 概数
comm alg . f.g module over Noetherian commutative ring (with 1)
rep of grp · group representation over group (~> group algebra)
p-adic rep · smooth representation over unimodular gp ( ~> Hecke algebra H(G)) smooth module
quiver theory quiver representation over quiver (>>> path algebra, bound quiver algebra)
Lie algebra · Lie alg representation
                                  over Lie alg (~> universal enveloping algebra)
        — Arithmetic Geometry克数→p进分析
                                                                       X
            hermitian line bundle over
                                       projective arithmetic variety
                                       essentially quasi-proj scheme
             · adelic line bundle
                                  over
                                   over Berkovich analytic space
                                        formul scheme
                                                                  SpfA
                                   o ver
                                   over rigid-analytic space K-affinoid space
```

over adic space

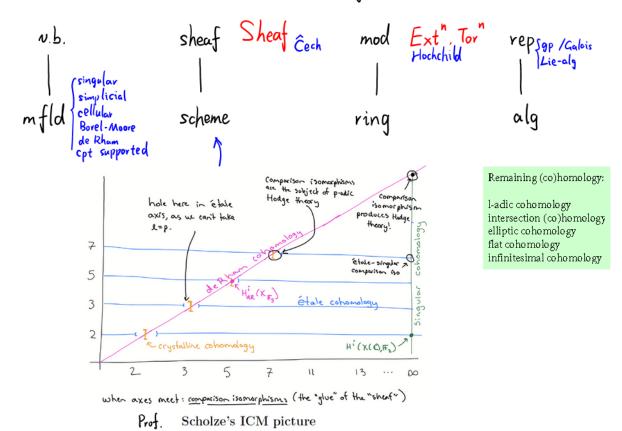

Spa (A, AT)

variation (e.g. v.b → f.b., mfld→CW cplx, sheaf → fctor, scheme → stack/adic space,...)
 vertical relation. J. v.b as mfld, representable fct, Spec/Proj construction,...
 †: tangent/trivial v.b., structure sheaf, Ras R-mod, regular rep,...

3 horizontal relation.

@ homology and cohomology: ~> derived category

https://www.youtube.com/watch?v=5NPFQvdav90

Objects in upper row can be already viewed as element in (co)homology, eg. v.b. \leftrightarrow transition fet \leftrightarrow H'(X, -)

One motivation for ∞ -category, make a generalization from H' to Hⁱ

w.b. differential form

N.b. metrics sheaf mod Ext Tor rep

I measure subvariety ring alg

The following two pictures comes from here: https://guests.mpim-bonn.mpg.de/gallauer/docs/m6ff.pdf

Coefficients	cohomology groups	
$D^{b}_{c}(X;\mathbb{Q}_{\ell})$ constructible ℓ -adic sheaves	ℓ-adic cohomology	
$D^{\mathrm{b}}_{\mathrm{c}}(X(\mathbb{C});\mathbb{Z})$ constructible analytic sheaves	Betti cohomology	
$D^{\mathrm{b}}_{\mathrm{h}}(\mathfrak{D}_X)$ holonomic \mathfrak{D} -modules	de Rham cohomology	
$D^{b}(Coh(X))$ coherent sheaves	coherent cohomology	
$D^b(MHM(X))$ mixed Hodge modules	absolute Hodge cohomology	
DM(X) Voevodsky motivic sheaves	(weight-0) motivic cohomology	
SH(X) stable motivic homotopy sheaves	stable motivic (weight-0) cohomotopy groups	

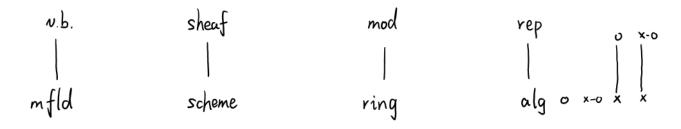

© Relative point of view (for (co)homology) Six functors formalism (all are derived)

cohomology
$$p_*p^*\mathbb{1}$$
 H^{\bullet} $p_*\mathcal{I}$ $H^{\bullet}(-,\mathcal{I})$ cohomology with compact support $p_!p^*\mathbb{1}$ H^{\bullet}_c $p_!\mathcal{I}$ H^{\bullet}_c $p_!\mathcal{I}$ H^{\bullet}_c $p_!\mathcal{I}$ H^{\bullet}_c $p_!\mathcal{I}$ H^{\bullet}_c $p_!\mathcal{I}$ H^{\bullet}_c

Chern class: from cohomology to cohomology (also for the other Char class)
There are several ways of defining/viewing Chern class.

- i) $\mathcal{L} \in Pic_{\mathbf{c}}(X) \longrightarrow c_{\mathbf{c}}(\mathcal{L}) \in H^{1}(X; \mathbb{Z})$
- ii) $H'(X, \mathcal{O}_X^{\times}) \longrightarrow H^2(X; \mathbb{Z})$ by LES
- iii) As the coefficient of equation (CH*(PE) is a free CH*(B)-module) Euler class
- iv) As the pull back of the universal Chern class in Grassmannian
- v) From curvature; Chem-Weil theory
- vi) From Chow group
- Ni) 99, V

6 moduli problems

Three type of geometry:

PDE	elliptic	parabolic	hyperbolic
curvature	+	· o	'-
genus	0	1	32
Euler number	-2	0	≥2
Kodaira dim	-0	0	dim X
variety	Fano	Calabi - Yau	general type
filstration	unramified	tame	wild "
quiver	Dynkin	affine	strictly wild
condensed	solid	liquid	gaseous

Goal - structures & invariants

- classifications of

special v.b, mfld, subv.b, submfld

- symmetry & quotient
- special functors
- homological algebra, derived version

Today we will focus on the comparison between v.b. and local system.

1. classifications of real/cplx v.b. on S?.

(by homotopy group! ~>> generalized Picard group?)

Q: Is this group structure natural?
