## Eine Woche, ein Beispiel 6.19 idempotent algebras

This document want to discuss some basic contents of the course "https://people.mpim-bonn.mpg.de/scholze/Complex.pdf", Lecture 5. For me I've never noticed about this special structure before. Hope that you enjoy this small magic.

This can be a perfect series of exam questions for the Algebra III in USTC. (better if they have learned computations on tensor products)

Q: Find all (reduced) 
$$\mathbb{Z}$$
-algebra  $A$  s.t.  $A \otimes_{\mathbb{Z}} A \cong A$  as a  $\mathbb{Z}$ -alg iso.

A crash recap on [Vakil 9.2] Skip if you know fiber product of schemes!   

$$E_{x}$$
.  $C \in CRing$ ,  $A, B \in C - Alg$   $\Rightarrow A \otimes_{c} B$  is  $C - Alg$ , and  $A \otimes_{c} B \longleftarrow A$ 

$$\uparrow \qquad \uparrow \qquad \uparrow \qquad B \longleftarrow C$$

is a pushout.

Let 
$$\phi: B \to A$$
 be a ring homomorphism.  $I \triangleleft B$   $S$  multiplicative set 9.2.A. (Adding an extra variable).  $A \otimes_B B[t] \cong A[t]$  9.2.B (Quotient)  $A \otimes_B B/I \cong A/\phi(I)$ 

9. 2. F (Localization) 
$$A \otimes_B S^{-1}B \cong [\phi(S)]^{-1}A$$

Definition and some cases

Def. Let  $R \in Ring$ .  $A \in R - Alg$  is called idempotent R - algebra if  $A \otimes_R A \cong A$  induced by  $A \cong R \otimes_R A \longrightarrow A \otimes_R A$ as an R - alg iso.

Ex. Verify that  $\mathbb{Z}[\frac{1}{6}]$ ,  $\mathbb{F}_p$ ,  $\mathbb{Q}$  are idempotent  $\mathbb{Z}$ -algebras. Is  $\mathbb{F}_p^2$  idempotent? Is  $\mathbb{Z}/p^2\mathbb{Z}$  idempotent? Is  $\mathbb{Z}_p$  idempotent?

A new topology on Spec A

Def. (Constructible topology)  $X \subseteq Spec A$  is called constructible closed if  $\exists f: Spec B \rightarrow Spec A$  Imf = X

Ex. Find all constructible closed subset of Spec  $\mathbb{Z}$ Ex. Find all constructible closed subset of Spec  $\mathbb{C}[X]$ Ex. {Zariski closed/open subset}  $\subseteq$  {constructible closed set}

Lem. A, A' are idem R-algs. Then # Morr-alg (A, A') ≤ 1.

Cor. Siden R-algs } is a poset.

Fact. This order is compatible with constructible topology

(Only consider reduced algs. R is Noetherian.)

may be  $\rightarrow E_X$ . false
